DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-7, 15-18 and 26-33 are rejected under 35 U.S.C. 102(b) as being anticipated by Tsuyama et al.

Note "a cause editor interface that allows an author to place, in a cause data structure, information pertaining to cause of malfunction of the product" (terminal apparatus capable of inputting new fault information by maintenance engineer, see lines 60-63 of column 2 and lines 17-21 of column 3), "an action editor interface that allows an author to place, in an action data structure, information pertaining to actions that can be taken to correct malfunction of the product" (an unit for generating information concerning adjustment or repair of the product suffering from the fault, see lines 1-2 of column 3) and "a question editor interface that allows an author to place, in a question data structure, information pertaining to questions that can be asked a user of the product to help identify cause of malfunction of the product" (an unit for generating information concerning structure and the characteristics of the product, see lines 1-6 of column 3) as claimed in claim 1 of the application and taught by Tsuyama et al.

Note "a library of modules, at least one of the modules contain troubleshooting

Art Unit: 2625

information about a component of the product" (a plurality of modules, i.e. library includes fault analysis/predicting module, see lines 6-34 of column 13) as claimed in claim 2 of the application and taught by Tsuyama et al.

Note "author can save the library of modules to a disk storage device, load the library of modules from the disk storage device, load the library of modules from the disk storage device an create a new library of modules" (fault information is edited on a computer, which would inherently permit loading, saving and creating module file) as claimed in claim 3 of the application.

Note "author can select modules from the library of modules when building the automated troubleshooter for the product" (a plurality of modules, i.e. library includes fault analysis/predicting module, see lines 6-34 of column 13) as claimed in claim 4 of the application and taught by Tsuyama et al.

Note "author can create new modules and delete modules" (fault information is edited in a computer, which would inherently permit creating and deleting of module files) as claimed in claim 5 of the application.

Note, "author can rename modules and import modules from other libraries of modules" (fault information is edited on a computer, which would inherently permit renaming and import modules files) as, claimed in claim 6 of the application.

Note "name of the cause" (ID of individual fault node, see lines 21-41 of column 9), "parent of the cause" (parent of individual node, see line 24 of column 9), "explanation of the cause" (for symptom or test procedure, see lines 25-27 of column 9) and "probability of the cause being source of malfunction" (see lines 31-36 of column 9) as

Art Unit: 2625

claimed in claim 7 of the application and taught by Tsuyama et al.

Note cause editor, action editor and question editor "create entries" (information is edited on a computer, which would inherently permit creating module files) as claimed in claim 15 of the application.

Note cause editor, action editor and question editor "edit existing entries" (information is edited on a computer, which would inherently permit edit existing module files) as claimed in claim 16 of the application.

Note cause editor, action editor and question editor "delete entries" (information is edited on a computer, which would inherently permit deleting module files) as claimed in claim 17 of the application.

Note "cause editor interface that allows an author to place, in a cause data structure, information pertaining to causes of malfunction of the product" (terminal apparatus capable of inputting new fault information by maintenance engineer, see lines 60-63 of column 2 and lines 17-21 of column 3), "name of the cause" (ID of individual fault node, see lines 21-41 of column 9), "parent of the cause" (parent of individual node, see line 24 of column 9), "explanation of the cause" (for symptom or test procedure, see lines 25-27 of column 9) and "probability of the cause being source of malfunction" (see lines 31-36 of column 9) as claimed in claim 18 of the application and taught by Tsuyama et al.

Note "troubleshooter model editor interlace that allows the author to place in a troubleshooter model structure, information pertaining to malfunction of the product" (fault tree is edited by terminal apparatus capable of inputting new fault information by

Art Unit: 2625

maintenance engineer, see lines 54-63 of column 2) and "library module editor interface that allows the author to place in a library data structure information pertaining to modules corresponding with components of the product" (a plurality of modules, i.e. library includes fault analysis/predicting module are edited, see lines 6-34 of column 13) as claimed in claim 26 of the application and taught by Tsuyama et al.

Note "name of a component of a module" (ID of individual fault node, see lines 21-41 of column 9), "causes of the component malfunctioning" (symptom, see lines 25-27 of column 9), "action that can resolve malfunctioning of the component" (information concerning adjustment or repair of the product suffering from the fault, see lines 1-2 of column 3) and "questions that can provide information about the causes of the component malfunctioning" (information concerning structure and the characteristics of the product, see lines 1-6 of column 3) as claimed in claim 27 of the application and taught by Tsuyama et al.

Note "name of a component of a module" (ID of individual fault node, see lines 21-41 of column 9), "causes of the component malfunctioning" (symptom, see lines 25-27 of column 9), "action that can resolve malfunctioning of the component" (information concerning adjustment or repair of the product suffering from the fault, see lines 1-2 of column 3) and "questions that can provide information about the causes of the component malfunctioning" (information concerning structure and the characteristics of the product, see lines 1-6 of column 3) as claimed in claim 28 of the application and taught by Tsuyama et al.

Art Unit: 2625

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains.

Patentability shall not be negatived by the manner in which the invention was made.

2. Claims 8, 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over
Tsuyama et al, as applied to claims 1 and/or 8, and in further view of Skeirik.

Tsuyama teaches the invention substantially as caimed. However, Tsuyama does not teach "dependency on environment" and "indication that a customer is not to access information pertaining to the cause". Skeirik teaches permitting a user in one environment access to edit rulebase (i.e. cause) while not giving access to other users (see lines 37-54 of column 42). Tsuyama and Skeirik are combinable because they are from the same field of endeavor. At the time of the invention, it would have been obvious to a person of ordinary skill in the art to use teachings of Skeirik in the system of Tsuyama in order to prevent the cause rule base from being changed by person that was not qualified and prevent new problems from being introduced.

Art Unit: 2625

Page 7

Conclusion

- 3. With regard to applicant's argument that Tsuyama et al does not teach the three separate editor interfaces that allow an author to place information into three separate data structure. Examiner disagrees with Applicant's conclusion. Examiner assets that Tsuyama et al. teaches the three separate editor interfaces that allow an author to place information into three separate data structure. The first interface reads on fig. 1 that depicts the cause or fault data structure as seen in the fault diagnosis facility which interfaces with the system to detect errors, second interface reads on fig. 1, item labeled as improvement activities that adjustment or repairs actions that can be taken to correct malfunction of the product, and third interface reads on fig. 1, item labeled as collecting analysis facility which questions the user(s) of product to identify cause of the malfunction.
- 4. Claims 9-14 and 29-33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 5. Claims 20-25 are allowable over the prior art of record. The prior art of record does not teach the invention as recited by allowed claims.

Art Unit: 2625

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gabriel I. Garcia whose telephone number is 571-272-7434. The Examiner can normally be reached Monday-Thursday from 7:30 AM-6:00 PM. The fax phone number for this group is 571-273-8300.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (571) 272-2600.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.
